QUALITY HILL CACTUS HOME

559 Evanston Ave. Kansas City, 3, Missouri

Zygocactus truncatus

By far the largest collection of Cacti and other Succulents in the greater Kansas City area is on display at our place. We are in no way connected with any other cacti dealer in the area.

TERMS All plants, except Specimen plants listed as not prepaid in list, are prepaid to you if your order is \$3.00 or more. Your plants will be packed and sent by parcel post to you. On specimen plants we pack them and send them Express collect unless you state otherwise. Not prepaid in Canada.

THIS LIST CANCELS ALL PREVIOUS RETAIL LISTS.

WARRANTY We guarantee safe arrival at any time of the year. Your plants are guaranteed to live for two weeks or we send your other plants FREE. All of our shipments will pass Horticultural Inspection. We want you to be satisfied.

Please mention one or two alternate choices if possible in case item is out of stock. All items are offered subject to stock hand. Some items are limited.

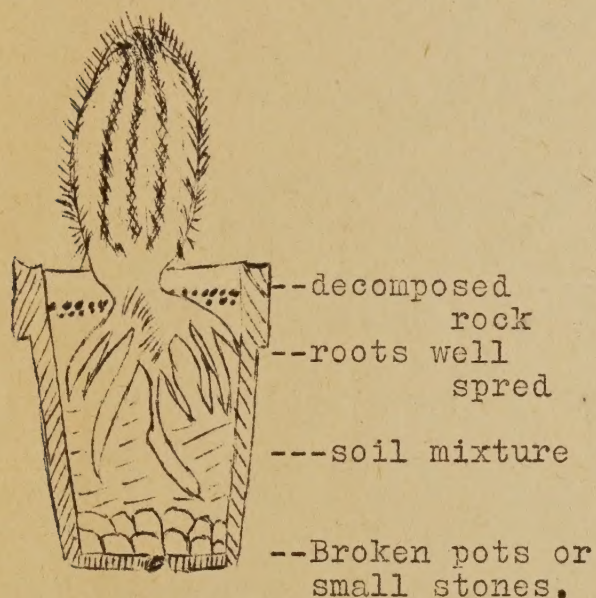

Due to the shortage of help all personal correspondence is limited.

AUG 1 1945

Culture of these interesting plants is quite easy if a few simple directions are observed. They are mostly native to desert climates and grow in coarse rocky soil, usually on sloping or mountainous country. These regions are subject to heavy rainfall at some seasons of the year, but often with long periods of drouth in between. The plants absorb water quickly through the roots when it is available and store it in the succulent tissue so that they can maintain life for a great period of time without water.

Clay pots have a large amount of surface exposed to the air and dry out quickly, hence under cultivation cacti require water more frequently than they would receive in their native habitat.

SOIL It is a very important factor in cacti growing. A good mixture we recommend is 1/3 leaf mould, 1/3 very rich garden loam, 1/3 sand and a little charcoal and old plaster if you have it.

POTTING Use pots that fit the plant comfortably do not try to put a plant in a pot about 1/2 its size. Place some broken pottery or small stones in the bottom to insure good drainage then fill with your soil mixture, tamping firmly about the well spread roots of the plant and allow the base of the plant to rest on top of the soil or cover only to the previous soil mark. The addition of a light layer of coarse sand or small gravel on top will add to the appearance of the plant and aid in aeration of the soil with great importance. It will also control the surface of the soil, by keeping it free from the growth of green scum or algae.

WATERING. They should be watered as often as the soil becomes dry. This may be daily in very hot weather or only once or twice a week in cooler weather. About every 10 days or two weeks with small collections it is a good thing to get a pan of water and set the pots in and let the water soak up through the hole in the bottom of the pot. Thus making sure the roots have some water.

SUCCULENTS Require practically the same treatment as cacti except that they require water more frequently than cacti.

WE HOPE YOU WILL GET AS MUCH PLEASURE OUT OF YOUR PLANTS AS WE DO.

COLLECTIONS

Col 1
Aloes 1½ to 4 in. plants
4 plants-----\$1.00

These beautiful plants are an outstanding plant in any collection no matter what size. They are marvelous for putting in dish-gardens as backgrounds. Their distinct markings, some with stickery leaves, some smooth and highly variegated, etc. All 4 distinctly different.

Col. 2
Stapelias all different
10 plants-----\$ 2.50

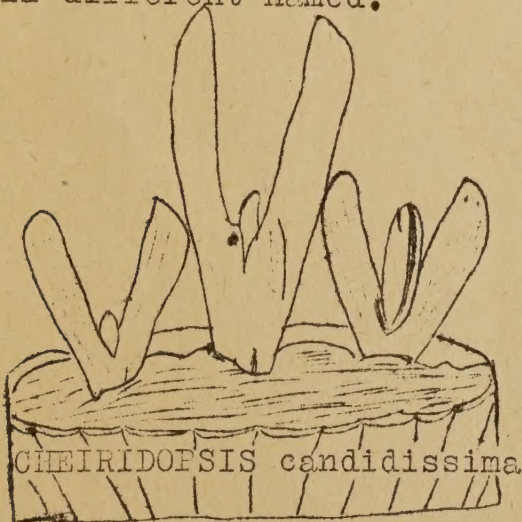

These rare African plants with their beautiful star shaped flowers. Flowers you won't believe are real they seem to be just a picture placed by the plant. No one will believe they are real. A wonderful addition to any collection.
10 all different named.

HERNIA penzigii

Col. 3
Succulents to be proud of
10 plants-----\$2.00

When you see them you will want more and more of them. They are wonderful. All colors, some tall. some short, some fat and some thin. No where can you get so wide a variety of these fascinating little plants.
10 all different named.

CHEIRIDOPSIS candidissima

Col. 4
 Haworthias 2 to 3 inches
 3 plants labelled-----\$1.00

These rare odd exciting plants with their delightfull markings some in almost designs on each leaf, some dark green with white markings on leaves, some light green with very thick leaves no white on them. All distinctly different plants. Are wonderful for pots in house if given sun. A real bargin Get some

HAWORTHIA MARGARTIFERA

Col. 5
 Hairy and rare plants
 10 plants-----\$2.50

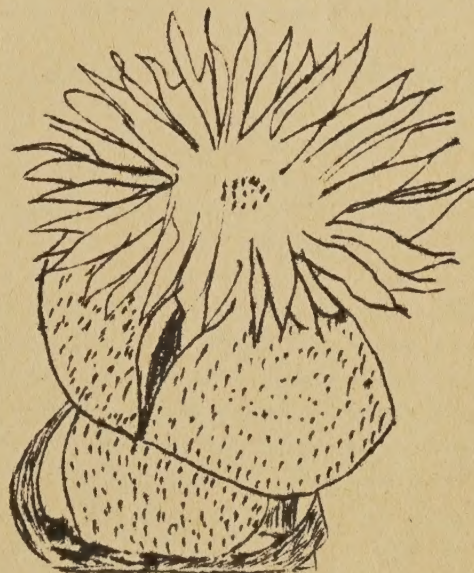

Some of the most lovely plants you have ever seen. Old man, powder puff, silver toren, biships cap, etc. Many beautiful plants all well known plants. Nice seedling plants. OUR choice. Be sure to get it.

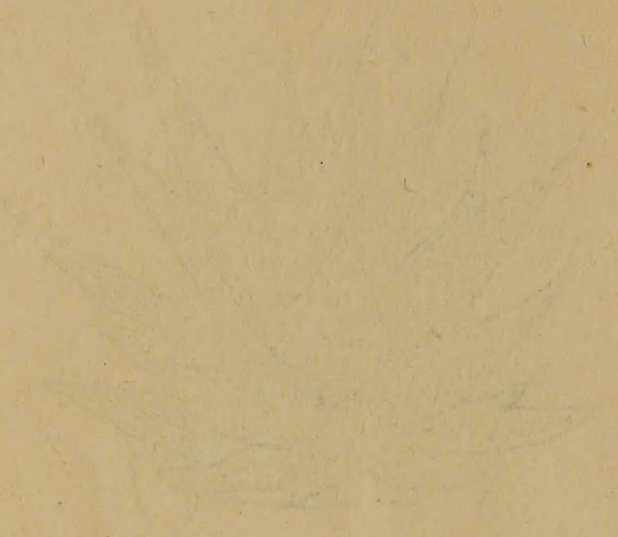

ASTROPHYTUM myriostigma

Col. 6
 Hairy and rare plants
 20 varieties-----\$6.00

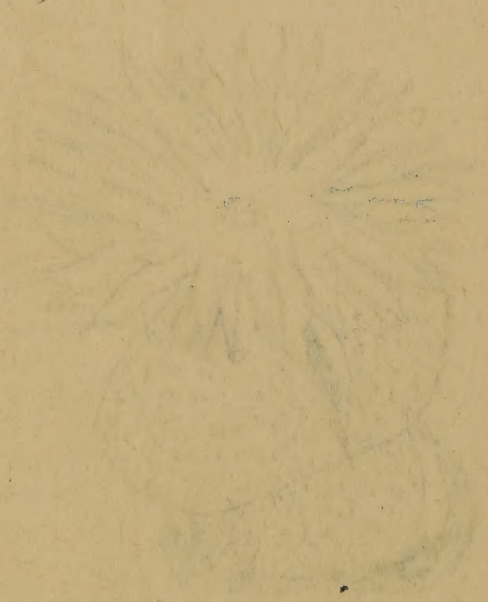

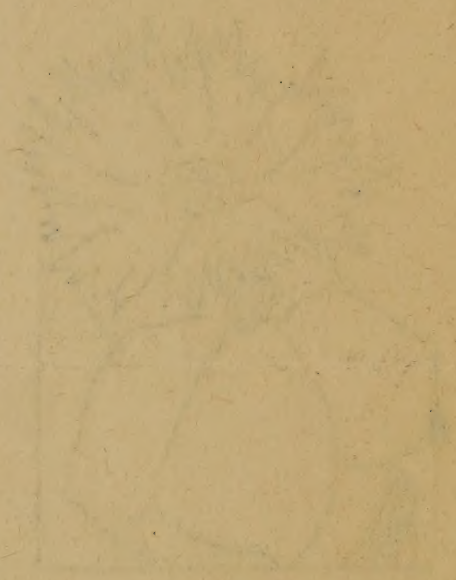

Lovely plants, 20 all different, some hairy, some rare plants, some like stone. All different no two alike. You have to see them to realize their beauty.
